The Social Brain Interaction Study for Autism!

Researchers at the University of Pittsburgh are looking for adults diagnosed with an Autism Spectrum Disorder to participate in a research study investigating the brain during social interaction. Participants will wear a safe and painless device measuring brain activity using infrared light while interacting with another person and wear a small device that records their daily conversations in their homes.

Contact us if you are:

- **Diagnosed with an Autism Spectrum Disorder**
- **Verbal**
- **Ages 18-45**
- **Participants will earn $75 for this 1–2 hour study**
- **Bus tickets/Parking provided**
- **FLEXIBLE HOURS!**
